Castlegate James Brewers Sweet Grain contains all the superior properties of Brewers Grain with the added benefit of starches and sugar. Brewers Sweet Grain has been developed to offer a complete moist mix feed.

Suitable for:

Brewers Sweet Grain

Brewers Sweet Grain offers highly digestible, effective 'space occupying fibre' allowing ruminant animals to gain greater energy intake from feeds. Dairy cattle in particular benefit from the high-quality starch source designed to increase milk protein and milk fat production, often limited by lack of essential amino acids.

Over 80% of Brewers Sweet Grain particles pass through the rumen quickly yet still contribute towards rumen fibre digestion and milk fat production.

Brewers Sweet Grain is an excellent glucose source assisting energy production and balancing the RDP (Rumen Degradable Protein) available in fresh grass.

The product can replace a portion of forage fibre and will increase feed intake due to high palatability.

Brewers Sweet Grain has a longer shelf life than standard Brewers Grain. Farmers limited by freight will also find Brewers Sweet Grain easier to access due to its drier composition. However, the moisture content of Brewers Sweet Grain is still sufficient to enrich dry rations and suppress dust.

Feeding guide

Dairy Cattle: Recommended daily intake up to 25.0% of total dry matter intake. (Total DMI)

Beef Cattle: Recommended daily intake up to 20.0% of total dry matter intake.

Sheep (Lambs): Recommended daily intake up to 10.0% of total dry matter intake.

Availability

Brewers Sweet Grain is available on a long term and regular basis for customers wishing to secure an ongoing supply. Customers can choose to purchase Brewers Sweet Grain on a spot basis subject to availability or enter a contract ensuring guaranteed supply.
